

18.1 LAB: Checker for integer string

Forms often allow a user to enter an integer. Write a program that takes in a string representing an integer as input, and outputs yes if every character is a digit 0-9.

Ex: If the input is:

1995

©zyBooks 04/25/22 13:13 1289653

Thaddeus Thomas

City_University_of_Seattle_-_CS351Spring2022

the output is:

yes

Ex: If the input is:

42,000

or any string with a non-integer character, the output is:

no

18.2 LAB: Name format

Many documents use a specific format for a person's name. Write a program whose input is:

firstName middleName lastName

and whose output is:

lastName, firstInitial.middleInitial.

Ex: If the input is:

Pat Silly Doe

©zyBooks 04/25/22 13:13 1289653

Thaddeus Thomas

City_University_of_Seattle_-_CS351Spring2022

the output is:

Doe, P.S.

If the input has the form:

firstName lastName

the output is:

lastName, firstInitial.

Ex: If the input is:

```
Julia Clark
```

the output is:

©zyBooks 04/25/22 13:13 1289653

18.3 LAB: Count characters

Write a program whose input is a string which contains a character and a phrase, and whose output indicates the number of times the character appears in the phrase. The output should include the input character and use the plural form, n's, if the number of times the character appears is not exactly 1.

Ex: If the input is:

n Monday

the output is:

1 n

Ex: If the input is:

z Today is Monday

the output is:

0 z's

©zyBooks 04/25/22 13:13 1289653

Thaddeus Thomas

City_University_of_Seattle_-_CS351Spring2022

Ex: If the input is:

n It's a sunny day

the output is:

```
2 n's
```

Case matters. n is different than N.

Ex: If the input is:

```
n Nobody
```

©zyBooks 04/25/22 13:13 1289653

Thaddeus Thomas

18.4 LAB: Mad Lib - loops

This section's content is not available for print.

18.5 LAB: Palindrome

A palindrome is a word or a phrase that is the same when read both forward and backward. Examples are: "bob," "sees," or "never odd or even" (ignoring spaces). Write a program whose input is a word or phrase, and that outputs whether the input is a palindrome.

Ex: If the input is:

```
bob
```

the output is:

```
bob is a palindrome
```

@zyBooks 04/25/22 13:13 1289653

Thaddeus Thomas

City_University_of_Seattle_-_CS351Spring2022

Ex: If the input is:

```
bobby
```

the output is:

```
bobby is not a palindrome
```

Hint: Start by removing spaces. Then check if a string is equivalent to its reverse.

18.6 LAB: Acronyms

©zyBooks 04/25/22 13:13 1289653

Thaddeus Thomas
City_University_of_Seattle_-_CS351Spring2022

An acronym is a word formed from the initial letters of words in a set phrase. Write a program whose input is a phrase and whose output is an acronym of the input. Append a period (.) after each letter in the acronym. If a word begins with a lower case letter, don't include that letter in the acronym. Assume the input has at least one upper case letter.

Ex: If the input is:

Institute of Electrical and Electronics Engineers

the output is:

I.E.E.E.

Hint: Use `isupper()` to check if a letter is upper case.

18.8 LAB: Warm up: Parsing strings

(1) Prompt the user for a string that contains two strings separated by a comma. (1 pt)

- Examples of strings that can be accepted:

- Jill, Allen
- Jill , Allen
- Jill,Allen

©zyBooks 04/25/22 13:13 1289653
Thaddeus Thomas
City_University_of_Seattle_-_CS351Spring2022

Ex:

```
Enter input string:  
Jill, Allen
```

(2) Report an error if the input string does not contain a comma. Continue to prompt until a valid string is entered. Note: *If the input contains a comma, then assume that the input also contains two strings.* (2 pts)

Ex:

```
Enter input string:  
Jill Allen  
Error: No comma in string.
```

```
Enter input string: Jill, Allen
```

(3) Using string splitting, extract the two words from the input string and then remove any spaces. Output the two words. (2 pts)

Ex:

```
Enter input string:  
Jill, Allen  
First word: Jill  
Second word: Allen
```

©zyBooks 04/25/22 13:13 1289653
Thaddeus Thomas
City_University_of_Seattle_-_CS351Spring2022

(4) Using a loop, extend the program to handle multiple lines of input. Continue until the user enters q to quit. (2 pts)

Ex:

```
Enter input string:
```

```
Jill, Allen
```

```
First word: Jill
```

```
Second word: Allen
```

```
Enter input string:
```

```
Golden , Monkey
```

```
First word: Golden
```

```
Second word: Monkey
```

18.9 LAB*: Program: Data visualization

(1) Prompt the user for a title for data. Output the title. (1 pt)

Ex:

```
Enter a title for the data:  
Number of Novels Authored  
You entered: Number of Novels Authored
```

(2) Prompt the user for the headers of two columns of a table. Output the column headers. (1 pt)

Ex:

©zyBooks 04/25/22 13:13 1289653

Thaddeus Thomas

City_University_of_Seattle_-_CS351Spring2022

```
Enter the column 1 header:  
Author name  
You entered: Author name
```

```
Enter the column 2 header:
```

Number of novels

You entered: Number of novels

(3) Prompt the user for data points. Data points must be in this format: *string, int*. Store the information before the comma into a string variable and the information after the comma into an integer. The user will enter **-1** when they have finished entering data points. Output the data points. Store the string components of the data points in a list of strings. Store the integer components of the data points in a list of integers. (4 pts)

©zyBooks 04/25/22 13:13 1289653

City_University_of_Seattle_-_CS351Spring2022

Ex:

```
Enter a data point (-1 to stop input):  
Jane Austen, 6  
Data string: Jane Austen  
Data integer: 6
```

(4) Perform error checking for the data point entries. If any of the following errors occurs, output the appropriate error message and prompt again for a valid data point.

- If entry has no comma
 - Output: **Error: No comma in string.** (1 pt)
- If entry has more than one comma
 - Output: **Error: Too many commas in input.** (1 pt)
- If entry after the comma is not an integer
 - Output: **Error: Comma not followed by an integer.** (2 pts)

Ex:

```
Enter a data point (-1 to stop input):  
Ernest Hemingway 9  
Error: No comma in string.
```

```
Enter a data point (-1 to stop input):  
Ernest, Hemingway, 9  
Error: Too many commas in input.
```

©zyBooks 04/25/22 13:13 1289653
Thaddeus Thomas
City_University_of_Seattle_-_CS351Spring2022

```
Enter a data point (-1 to stop input):  
Ernest Hemingway, nine  
Error: Comma not followed by an integer.
```

Enter a data point (-1 to stop input):

Ernest Hemingway, 9

Data string: Ernest Hemingway

Data integer: 9

(5) Output the information in a formatted table. The title is right justified with a minimum field width value of 33. Column 1 has a minimum field width value of 20. Column 2 has a minimum field width value of 23. (3 pts)

Ex:

Number of Novels Authored	
Author name	Number of novels
<hr/>	
Jane Austen	6
Charles Dickens	20
Ernest Hemingway	9
Jack Kerouac	22
F. Scott Fitzgerald	8
Mary Shelley	7
Charlotte Bronte	5
Mark Twain	11
Agatha Christie	73
Ian Flemming	14
Stephen King	54
Oscar Wilde	1

(6) Output the information as a formatted histogram. Each name is right justified with a minimum field width value of 20. (4 pts)

Ex:

Jane Austen	*****
Charles Dickens	*****
Ernest Hemingway	*****
Jack Kerouac	*****
F. Scott Fitzgerald	*****
Mary Shelley	*****
Charlotte Bronte	****
Mark Twain	*****
Agatha Christie	

```
*****  
Ian Flemming *****  
Stephen King  
*****  
Oscar Wilde *
```
